

**QUALITY... PLAIN & SIMPLE®**

**Door Handle, Window Crank & Vent Window Crank  
Installation Instructions**

**General Installation Notes:**

Please read instructions completely before beginning installation. If you have any questions please call.

Before starting installation, set parking brake and scotch vehicle wheels to avoid accidental movement of the vehicle.

Refer to Fig. 1 for the component names and Fig. 2 for an exploded view.

**Step 1:** Remove existing door handles/window crank arms. Clean the handle/crank shafts to remove any dirt or rust.

**Step 2:** If this is a new installation and the handle/crank shafts (not included) on the window regulator or door handle mechanism are excessively long, the shafts can be cut to the desired length. Be sure to leave them long enough so that the trim ring does not touch the door panel and create wear.

**Step 3:** Slide the shaft insert and trim ring out of the new Lokar handle/crank arm. Then remove the cap from the handle/crank arm by pushing it outwards from behind.

**Step 4:** Slide the shaft insert onto the handle/crank shaft. Tighten the two set screws on the shaft insert against the shaft.

**Step 5:** Slide the trim ring onto the shaft insert.

**Step 6:** Determine how you want the handle/crank arm to be positioned, and slide the handle/crank arm onto the shaft insert. Install the large diameter washer into the recess in the handle/crank arm, and then install the 1/4"-28 x 5/16" button head bolt through the washer and into the insert.

**Step 7:** Install the cap onto the handle/crank arm. If the cap needs to be removed in the future, it can be pried away from the handle/crank arm using a razor blade inserted between the cap and the handle/crank arm.
