

UPR Oil Catch Can Installation 2021 Ford Bronco 2.7

1. Using the supplied hardware, attach the UPR billet catch can mounting bracket to the middle hole at the front of the battery tray. To make this easier, you can remove the battery hold down bracket which will allow you to move the battery slightly.

2. Attach the catch can to the UPR billet bracket with the supplied knob. You can leave the catch can slightly loose to allow adjustment when routing hoses. The allen screws at the top of the catch can allow for adjustment as well. Once the hoses are routed, adjust the catch can for best fit and tighten fasteners.

3. Locate the U shaped PCV hose and remove it by releasing the quick release fittings. Save this hose in case you ever want to return the vehicle back to stock.

4. Connect the hose with 45 degree fittings from the side of the catch can to the intake manifold vacuum port. Connect the hose with 90 degree fittings from the PCV valve on the passenger valve cover to the top of the catch can. You can secure the hoses if desired with zip ties, but if routed as shown they will be secure.

5. The UPR catch can is easily serviced by removing the quick release knob, releasing the quick release fittings by pressing the grey buttons (**never** pry the buttons out) and disconnecting the hoses. Unscrew the catch can cup and dispose of the contents with used waste oil and dispose waste oil according to your local laws. The catch can and components are easily washed with warm water and dish soap. If need be, the catch can and components can be removed and the vehicle can be returned to stock for dealer service.

Always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and catch can components. Any damage due to freezing is NOT WARRANTY. You must dispose of the liquid collected in the catch can properly (with used waste oil) properly according to your local laws.
