

TEST DRIVE CHECKLIST

- Check VIN in 2 locations (make sure they match)
- A/C runs (if equipped)
- Engine oil, transmission fluid, and coolant levels should be free of leaks and fluid should be clean and free of debris
- Check hoses and belts for signs of rot or decay
- Listen for engine knocking, ticking, or tapping
- Smell the engine after it's been running to ensure it doesn't smell like burning oil
- Check the glove compartment for the owners manual and service records
- Check the body for any signs of chassis damage
- Check windows, lights, and blinkers for functionality
- Check shifting for all gears
- Leave car idling and listen for unusual noises
- Brake first at low speeds then gradually increase to check for functionality and noise
